

ANALYTIX ADMIN GUIDE

System Administration, RBAC Configuration, & Connector Setup

Document Type: Official Technical Operations Guide

Version: 4.0.0 (Production Release)

Regulatory Status: FDA 21 CFR Part 11 Compliant Environment

Author: AnalytiX Biopharma Solutions Division

Classification: CONFIDENTIAL

1. System Administration & Configuration Guidelines

This administrative guide details configuration settings, user access controls, and database connector setups for the AnalytiX platform.

2. User Management & Onboarding

1. Navigate to Settings and select the **User Admin** tab.
2. Click 'Invite User'.
3. Enter the user's corporate email address and pre-assign a system role (Scientist, Admin, Compliance Officer).
4. The user receives an email containing login instructions.

3. Role-Based Access Control (RBAC) Administration

Access permissions are managed using the permission matrix in the **RBAC Control** tab. Assign write access only to users who require editing rights for metadata schemas or connector configurations.

4. Configuring Data Connectors

1. Go to the **Data Connectors** page.
2. Click 'Add New Connector'.
3. Select the target database type (e.g., Snowflake, Oracle) and enter the host, port, database name, and credentials.
4. Click 'Test Connection'.
5. Click 'Discover Schema' to map database tables to the platform.

5. Audit Log Ledger Verification

Maintain compliance by verifying the integrity of the audit logs. In the **Audit Trail** module, click 'Verify Ledger Integrity' to run verification scripts across the hash-chained database records.
